

N1MU / Rover Mast Mounting Detail

Tom Mayo 2003-07-01

Notes:

1. Clevis allows mast to fold over and rotate about the vertical axis.
2. Plate is installed to reduce the diameter of the receiver hole normally fitted with a ball.
3. Plate mounting bolts keep plate in position.
4. Greased washers keep clevis above plate mounting bolts to prevent interference and allow the clevis to rotate easily.
5. Mast must be held with a cross member above the vehicle roofline for support.
